#### What is the ICESHOT?

The ICESHOT is an all natural skin numbing & pain relief agent used for a wide array of uses!

#### Why do I Need it?

The ICESHOT is perfect for those people who live life with diabetes and know about the pain and anxiety of taking any shots on a regular basis.

#### How Does It Work?

Simply freeze the ICESHOT overnight (always with the top down) and get ready to use the next day. Before any injection, press the top of the ICESHOT to the injection site for 20 seconds to numb the area and then inject. For an residual pain that may come later, simply use the ICESHOT again to alleviate with no messy gels, swabs or pads.

#### Who Would Benefit from ICESHOT?

- Great for **DIABETICS** who take insulin injections and finger pricks for blood testing.
- Highly effective for **MOST INJECTIONS** including insulin, fertility, vitamin, botox cosmetic, immunization, vaccinations and other types of injections
- Great for targeted **PAIN RELIEF** of joint, tendon, arthritis and other types of pain. Reduce inflammation.
- **PERFECT FOR KIDS** to sooth bumps, bruises, insect mosquito bites, splinter extraction, as well as for back-to- school vaccinations.
